

# The Case for Structured Preventive Healthcare

## An Executive Brief — Beacon Health Limited

Most people discover they are seriously unwell only after it is harder to help them. A missed screening, a skipped check-up, a system built to treat rather than prevent. The cost to individuals, families, organisations, and healthcare systems is measurable and significant. **Beacon Health exists to change that.**

### THE STRUCTURAL GAP

- Preventive screening remains largely episodic and event-driven
- Fragmented across devices, workflows, and providers
- Weak in follow-up continuity after the screening event
- Dependent on clinic access rather than reaching people where they are
- Late detection leads to higher treatment costs and poorer outcomes

### WHAT BEACON HEALTH DOES

Beacon Health is a purpose-driven preventive healthcare platform company. We curate best-fit technologies, orchestrate trusted ecosystem partners, and deploy managed programs that make preventive screening, insights, and connected care pathways accessible — across communities, institutions, and enterprises.

Our flagship platform, **hPOD**, translates this mission into a practical, AI-enabled screening infrastructure designed for real-world deployment at scale.

### INTRODUCING HPOD

hPOD is a modular, AI-assisted health screening platform integrating diagnostics, preventive screening, and digital health workflows into a single deployable unit — moving preventive healthcare from isolated events into structured, longitudinal programs.

#### Vitals

- BP, SpO2, BMI
- Heart Rate, ECG
- Body Composition
- Temperature

#### Mini-Lab

- Glucose, Lipids
- Hemoglobin
- Urinalysis

#### Infectious

- Dengue, Malaria
- HIV, Hepatitis
- Typhoid, Syphilis

#### Imaging

- Thermalytix(r)
- AI Thermal Breast
- Screening
- FDA-cleared

FDA-cleared | CE-marked | CDSCO-approved

hPOD is powered by **hCare** — a digital orchestration layer enabling structured workflows, digital health records, telehealth escalation, and enterprise-level reporting.

### Screening alone does not change outcomes. Structured follow-through does.

hPOD extends beyond the screening event — connecting individuals to digital records, care pathways, and clinical follow-up.

*Prevention becomes meaningful when it is structured, governed, and repeatable — not when it is a one-off event. hPOD is built on that belief.*

— **Beacon Health**

# Why hPOD Works — and How to Deploy It

## HOW HPOD IS DIFFERENT

- **Deployed where people already are** — workplaces, campuses, clinics, community sites. No appointments required.
- **Structured, not episodic** — supports repeat screening cycles with longitudinal health records, not one-off events.
- **AI-assisted, not just measured** — embedded intelligence standardises capture and enhances early signal detection.
- **Program-governed** — cohort dashboards, risk segmentation, participation tracking and compliance reporting built in.
- **Non-invasive by design** — especially for breast health screening via Thermalytix, significantly improving participation.

## DEPLOYMENT CONTEXTS

- Enterprises and corporates — workforce health programs
- Universities and campuses — student and staff screening
- Clinics and hospitals — integrated preventive pathways
- Government and public health — population screening initiatives
- Community and outreach — mobile and rural access programs
- Real estate and residential — health embedded in living environments

## THREE DEPLOYMENT MODELS

### Screening-as-a-Service

Fully managed delivery on defined minimum volumes. Beacon Health handles operations, reporting, and program governance end to end.

### Purchase + Managed Services

Organisation acquires hPOD and Beacon Health provides ongoing operational support, training, and program management.

### Lease Model

Flexible access without capital commitment. Suitable for pilot programs, seasonal deployments, or phased rollouts.

## OUR OPERATING MODEL

Every Beacon Health deployment follows a clear, repeatable model: **Curate** the right partners and technologies. **Orchestrate** workflows, data, and care pathways. **Deploy** with operational support and governance. **Operate** with continuous improvement and reporting.

Originated in New Zealand and now active across Sri Lanka and the Pacific, Beacon Health brings international delivery experience and a curated ecosystem of certified OEM partners to every program.

## Start a Strategic Conversation

Whether you are evaluating a preventive care program, exploring deployment models, or aligning partners for delivery — we welcome the conversation. All enquiries are reviewed directly by our founder.
