

hPOD - Future-ready Health Screening Infrastructure

Reimagining how preventive and diagnostic health is delivered

hPOD brings health screening closer to people enabling faster, standardised and scalable preventive care across enterprise and population environments. Designed for decentralised deployment, it removes the operational limitations of traditional clinics and labs.

What is hPOD

hPOD is a modular, AI-assisted health screening platform that integrates diagnostics, preventive screening and digital health workflows into a single, deployable unit.

Built for Enterprise and Population Health

- Designed for multi-site corporate and large-scale deployments
- Supports preventive, periodic and program-based screening
- Compact, deployable and easy to operate in real-world environments

Technology-led, Clinically Grounded

- AI-assisted screening & decision support
- Modular diagnostics that evolve with program needs
- Secure digital workflows for reporting and analytics

Compliance and Readiness

Regulatory-ready architecture designed to align with applicable medical device, data protection and security standards.

Technology-led screening, built for scale

hPOD brings together AI-assisted diagnostics and preventive screening capabilities designed for enterprise and population health programs. At the core is Thermalytix® by Niramai, the platform's flagship imaging innovation for women's health.

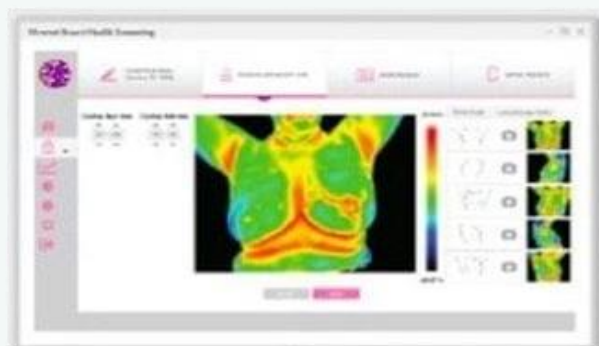

AI-assisted, non-invasive breast health screening

What it is

Thermalytix® by Niramai is an AI-assisted breast health screening solution that uses advanced thermal imaging to identify early risk patterns. It enables non-contact, radiation-free screening without physical compression, making it suitable for large-scale and repeat screening programs.

Why it matters

- Enables preventive breast health screening at scale
- Significantly improves participation due to comfort and safety
- Ideal for workplace and population-level screening initiatives

Key Advantages

- Non-invasive and radiation-free
- AI-assisted thermal imaging with automated risk stratification
- No physical contact or compression required
- Designed for periodic and repeat screening

Benchmark Indicators

- Screening completed in minutes per participant
- Suitable for annual and periodic screening programs
- High-throughput readiness for enterprise and population deployments

Vitals

Digital capture of core physiological parameters for rapid baseline health screening.

Screening completed in minutes per participant

Mini-Lab

On-site point-of-care diagnostics enabling quick test results without external lab dependency.

Rapid turnaround for essential diagnostic tests

Infectious

Rapid screening and triage for infectious risk using protocol-led and AI-assisted assessment.

High-throughput screening suitable for workforce and population programs

A digital health platform that extends hPOD beyond screening

hPOD is powered by a robust digital layer that enables orchestration, visibility and continuity of care turning on-site screening into structured, enterprise-ready health programs.

Care orchestration and program management

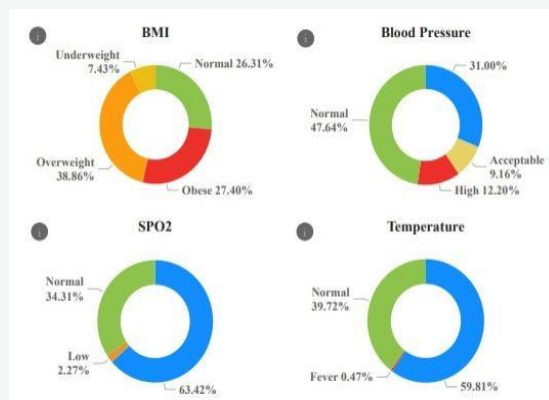

hCare enables end-to-end coordination of health screening programs from scheduling and workflow management to clinical review and reporting ensuring consistent execution across locations.

- Structured screening workflows
- Program-level visibility and control
- Seamless coordination between on-site screening and follow-up care

Enterprise health insights and reporting

The Corporate Portal provides organisations with a unified view of screening programs, participation, coverage and outcomes supporting informed decision-making and compliance reporting.

- Cohort-level dashboards and analytics
- Screening coverage and participation tracking
- Enterprise and compliance reporting

What sets the hPOD platform apart

- Built for program orchestration, not isolated screenings
- Designed for enterprise visibility and scale
- Enables continuity of care beyond the screening event
- Integrates clinical workflows with organisational reporting needs

Telehealth

Remote consultation and escalation layer enabling clinical review, follow-ups and continuity of care beyond on-site screening integrated seamlessly with hPOD workflows.

Device Extensions

Plug-and-play diagnostic peripherals, including digital stethoscope and future-ready sensor modules, enabling expansion of screening and diagnostic capabilities as program needs evolve.

Future Ready

Extensible architecture designed to support additional diagnostic and digital capabilities as healthcare and enterprise requirements grow.

Embedded preventive access for everyday environments

Disclaimer

hPOD provides structured preventive screening and does not replace medical consultation, diagnosis, or treatment.

Results generated through the platform are intended to support awareness and informed decision-making. Individuals are encouraged to consult qualified healthcare professionals for clinical interpretation and follow-up care.

Data is collected and stored with explicit consent and handled in accordance with applicable privacy and regulatory requirements. Records remain under the control of the individual and may be shared only when authorised.

Deployment models and service configurations may vary by location, regulatory framework, and institutional partnership.
